# Points of Departure

My background

PhD in Physics & PhD in Computer Science

Research on Information Theory and Philosophy of Information and  
Philosophy of Computation

Investigations into Information Semantics and Ethics of Computing (PhD  
Thesis)

Development and teaching of courses (PhD/Masters:

Philosophy of Computer Science, Swedish National Course (Developed in  
collaboration with PI-network) 2004 [http://www.gordana.se/PI\\_04/index.html](http://www.gordana.se/PI_04/index.html)

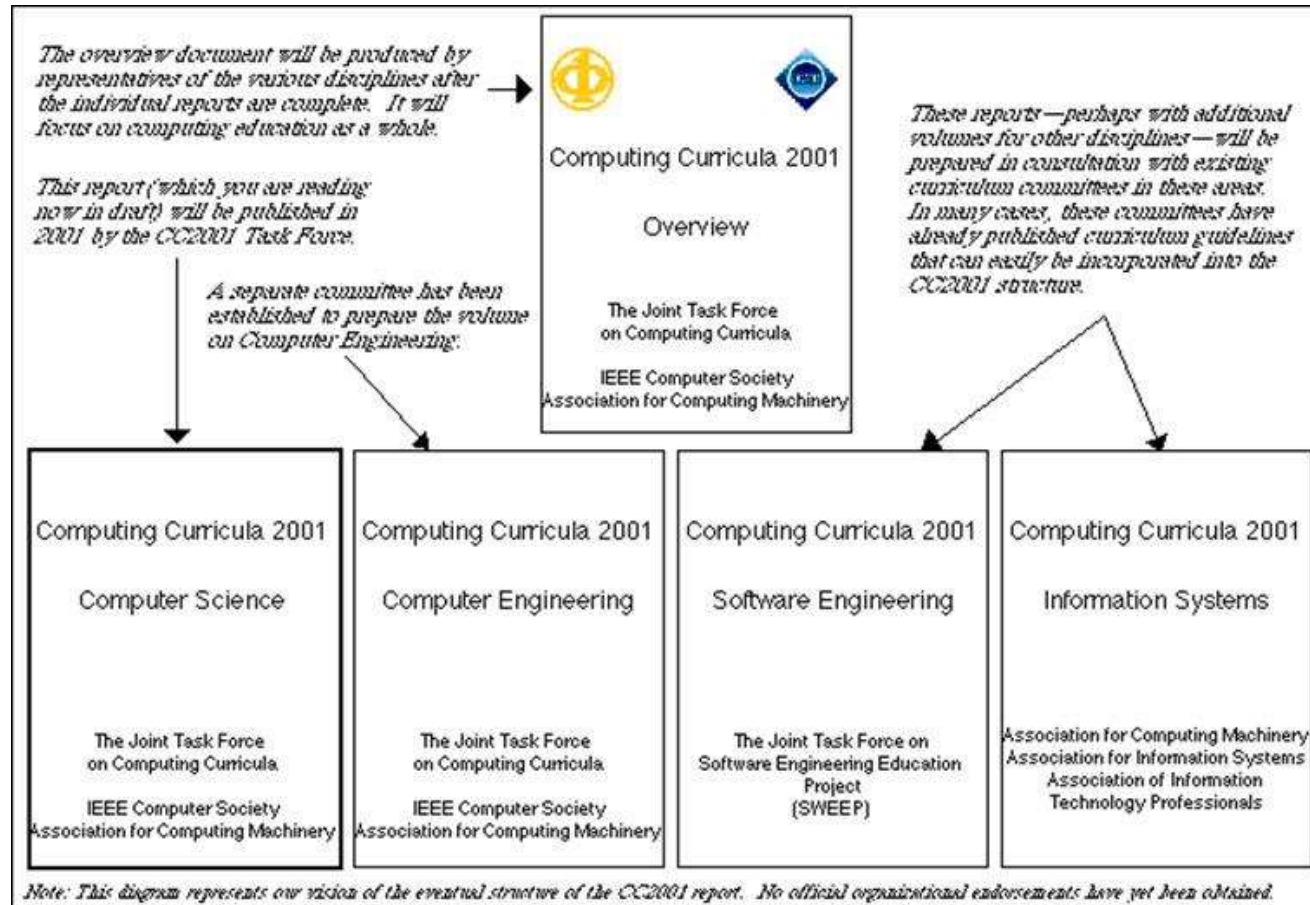

Computing and Philosophy, Global Course (with University of Illinois,  
Springfield, Insubria (Italy) and ACT (Thessaloniki, Greece)) (2008 – 2014)

# Related Courses

- Research Methods in Natural Sciences and Engineering (CDT403) PhD & Masters course (with Jan Gustafsson) (2000 – 2017)
- Formal Languages, Automata and Theory of Computation, CD5560 (2002 – 2014)
- Advanced Computational Thinking and Writing Research Toolbox (2009-2012)
- Computational Thinking and Writing Research Toolbox (2012-2013)
- Information - Knowledge - Science - Ethics (in Swedish) (with Jan Gustafsson 2013-2015 & (2015-2019), in Swedish)
- Philosophy of Computer Science, Swedish National Course (with PI-network) 2004 (PhD/Masters)
- The Methodology of Science in Technology CDT212, (with Jan Gustafsson) (2002–2010)
- Scientific Methods in Computer Science CD5420 (with Jan Gustafsson) (2001-2002)
- Professional Ethics in Science and Engineering, CD5590 (2003 – 2017)
- Computing and Philosophy, Global Course (with University of Illinois, Springfield, and several European universities) (2008 – 2014) (PhD course)
- Research Thinking and Writing Toolbox (2009-2012)
- Computing and Philosophy was also given as a reading PhD course until 2014.

09-12 Introduction to Philosophy of Information – Luciano Floridi

13-14 Discussion on Introduction to PI

14-15 Physics as an “Ideal Science” -

Philosophical Foundations and Consequences

Lars-Göran Johansson

15-17 The Function of Natural Laws in Physics

Lars-Göran Johansson

23 January

09-12 Philosophical Foundations of Computability

Gordana Dodig-Crnkovic

13-14 Discussion on Philosophical Foundations of Computability

14-15 Planning for the Course and Mini-Conference

Closing Remarks (GDC)

# PHILOSOPHY OF COMPUTER SCIENCE

## LECTURES – PART II

04 March

09-12 **Methodological Foundations of CS**

Erik Sandewall

13-14 Discussion on Meth. Found. of CS

14-15 **Critical Analysis of CS Methodology**

Björn Lisper, Jan Gustafsson

15-16 Discussion on Critical Analysis of CS

Methodology, Björn Lisper, Jan Gustafsson

05 March

09-12 **Modelling and Simulation**

Kimmo Eriksson, Lars-Göran Johansson

13-14 Discussion on Modelling and Simulation

14-15 DISCUSSION OF PAPER DRAFTS (GDC)

15-16 Closing Remarks

# PHILOSOPHY OF COMPUTER SCIENCE

## LECTURES – PART III

13 May

09-12 Ethics and Professional Issues in Computing

Gordana Dodig-Crnkovic

13-14 Discussion on Ethics and Professional Issues  
in Computing

14-15 Ethics and AI (Peter Funk)

15-16 Discussion on Ethics and AI

14 May

09-16 MINI-CONFERENCE

16-17 Closing Remarks

# PHILOSOPHY OF COMPUTER SCIENCE

## The Course Examination Form

The course was research-oriented and preparing the participants for collaborative research in this interdisciplinary area.

- 3 points: class attendance + class notes (at minimum 15 pages, at minimum 5 pages per course block)
- 2 points: research paper 6-10 pages (6000-8000 words), presented at mini conference

# Conclusions & Lessons Learned

## Why is Philosophy Important for Computing?

- Being well oriented in a philosophical context means having access to valuable “thinking tool-box” with:
  - Paradigms
  - Metaphors
  - Historical examples (knowledge capital)
- Communication within computing and philosophy communities and wider
- Context – conceptual and cultural framework
- The relation between philosophy and computing is very much two-way
  - philosophy with its broader context helps define computing which in its turn helps generate new philosophy

## Conclusions & Lessons Learned

### Why is Philosophy Important for Computing?

- Humanist dimensions of higher education are important!
- Knowledge society with automated production, organization and even automated knowledge discovery.
- Genuine human thinking abilities including creativity will make the difference!

"Of all things the measure is (hu)man, of the things that are, that how they are, and of things that are not, how they are not."  
(Protagoras, c. 490 - c. 420 BC)

# Conclusions & Lessons Learned

## Why is Philosophy Important for Computing?

Applying computational methods to philosophical matters:

Conceptual “experiments in silico”/ computational models/simulations

As an extension of an ancient tradition of thought experiment, a trend in philosophy is to apply computational modeling schemes to questions in logic, epistemology, philosophy of science, philosophy of biology, philosophy of mind, and so on.

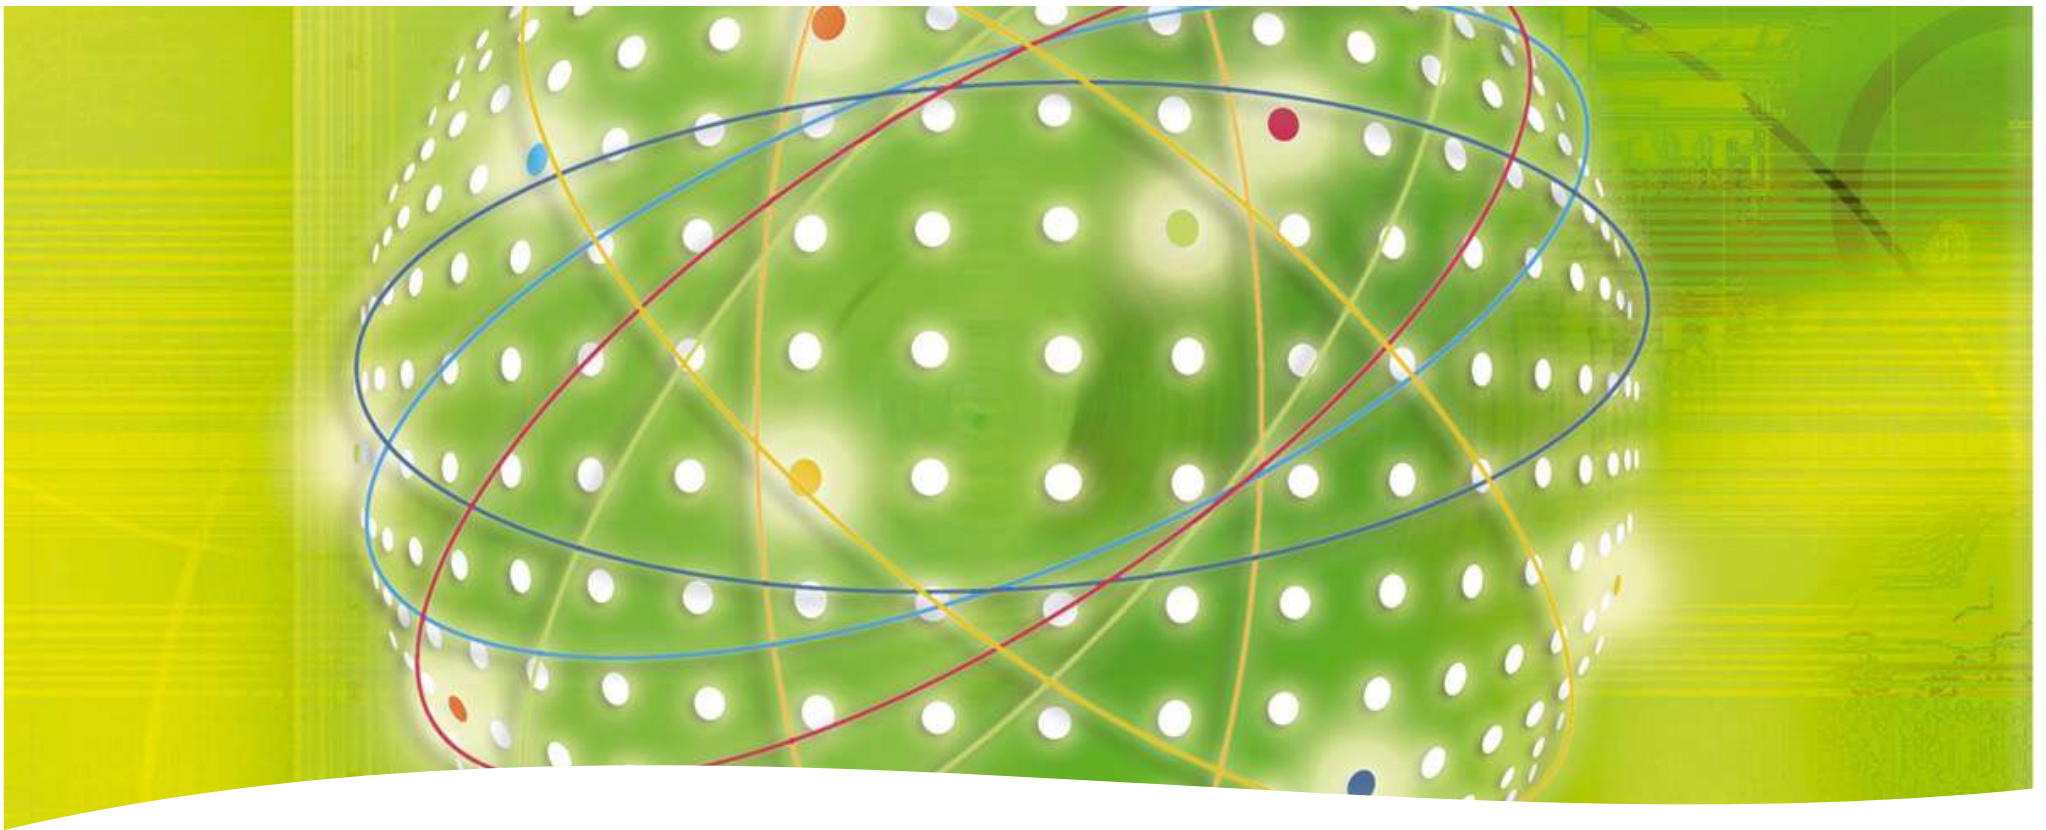

[www.research.ibm.com/](http://www.research.ibm.com/)

# Conclusions & Lessons Learned Why is Philosophy Important for Computing?

A universal computational modeling  
approach - pancomputationalism  
computation = information processing  
universe as a network of networks of  
computational processes

By this view, computational and informational  
concepts are considered to be so powerful  
that given the right level of abstraction,  
anything in the world could be modeled and  
represented as a computational (information  
processing) system [from the point of view of  
an observer], and any process could be  
simulated computationally.

## Results from the PI Course

Participants from different universities (Blekinge, Dalarna, Mälardalen, Skövde, Uppsala, SICS Stockholm) have taken part in the course and have presented their research papers at the Mini-conference.

These have been documented in the Course Proceedings, [http://www.idt.mdh.se/personal/gdc/PI\\_04/proceedings.pdf](http://www.idt.mdh.se/personal/gdc/PI_04/proceedings.pdf)

As a result of the course ten papers have been published in journals and conference proceedings or included as chapters in PhD theses.

## COURSE OUTLINE

### COMPUTING AND PHILOSOPHY - CaP COURSE

Course organizer: [Gordana Dodig-Crnkovic MDH](#)

Course coordinator: [Peter \(Piotr\) Boltuc UIS](#)

<b>Course Title:</b>	COMPUTING AND PHILOSOPHY
<b>Description:</b>	An international distance course with pre-recorded video lectures given by Peter Boltuc, Geatano Lanzarone, Vincent Muller, Keith Miller and Gordana Dodig-Crnkovic in collaboration with the leading scholars in the field of philosophy of computing and information.
<b>Duration:</b>	At MDH - period 2 year 2008. During the last week of October until two first weeks in December courses at different universities will overlap and we plan for discussions between students.
<b>Prerequisites:</b>	At least 150 university course points.
<b>Weight:</b>	7.5 ECTS (4.5 points for taking part in the class activities, discussions, quizzes and for class-notes/logbook, while writing a research paper is worth 3.0 credits)
<b>Level:</b>	Specialized
<b>Course Instructors:</b>	<a href="#">Peter (Piotr) Boltuc</a> Department of Philosophy, University of Illinois, Springfield, USA <a href="#">Keith W Miller</a> Dept. of Computer Science, University of Illinois at Springfield <a href="#">Vincent C. Müller</a> The American College of Thessaloniki, Greece <a href="#">Gaetano Lanzarone</a> University of Insubria, Italy <a href="#">Gordana Dodig-Crnkovic</a> , Mälardalen University, Sweden
<b>Guest Professors:</b>	Leading specialists within relevant fields.

<b>Assignments:</b>	Research paper and Lecture notes/Logbook.
<b>Description-Objectives:</b>	Course will give you insights in the fundamental problems of the field of computing and information philosophy, its ideas and relations to different sciences and its philosophical, ethical and societal/cultural relevance.
<b>Teaching Methods</b>	<p>Combined distance and on-campus course with lectures, guest lectures and classroom discussions. The course is given in English.</p> <p><u>Teaching Team:</u> [see Lecturers] + guest professors/recorded lectures</p> <p><u>Course Participants:</u> PhD students and presumptive PhD students.</p>
<b>Reading Materials</b>	<p>No textbook covers the entire course, but the main textbook will be <a href="#">The Blackwell Guide to the Philosophy of Computing and Information</a> (Blackwell Philosophy Guides), <a href="#">Luciano Floridi</a> (Editor)</p> <p>and we also rely extensively on <a href="#">APA Newsletter on Philosophy and Computers</a></p> <p>Some parts of the course are not in any textbook yet. As additional reading materials, number of different other sources (textbooks, journal articles, and similar) will be used. The course proceedings will be published.</p>
<b>Syllabus</b>	<p><a href="#">Computing and Philosophy Syllabus</a></p> <p><a href="#">Kursplan Datorer och Filosofi (in Swedish)</a></p>
<b>ECTS description</b>	<a href="#">ECTS-description</a>

## Similar courses (PhD/Masters)

- Philosophy of Computer Science, Swedish National Course (with PI-network) 2004
- Computing and Philosophy, Global Course (with University of Illinois, Springfield, and several European universities) (2008 – 2014)
- Research Thinking and Writing Toolbox (2009-2012)
- Computational Thinking and Writing Research Toolbox (2012-2013)
- Computing and Philosophy were also given as a reading Ph.D. course until 2014.

# THE WILDFIRE SPREAD OF COMPUTATIONAL IDEAS

"Everyone knows that computational and information technology has spread like wildfire throughout academic and intellectual life. But the spread of computational ideas has been just as impressive.

Biologists not only model life forms on computers; they treat the gene, and even whole organisms, as information systems. Philosophy, artificial intelligence, and cognitive science don't just construct computational models of mind; they take cognition to be computation, at the deepest levels.

Physicists don't just talk about the information carried by a subatomic particle; they propose to unify the foundations of quantum mechanics with notions of information. Similarly for linguists, artists, anthropologists, critics, etc. Throughout the university, people are using computational and information notions -- such as information, digitality, algorithm, formal, symbol, virtual machine, abstraction, implementation, etc. -- as fundamental concepts in terms of which to formulate their theoretical claims."

Brian Cantwell Smith on "The Wildfire Spread of Computational Ideas",  
2003

## THE WILDFIRE SPREAD OF COMPUTATIONAL IDEAS

“Furthermore, modern practice is bursting with possibility, as designers, playwrights, artists, journalists, musicians, educators, are drawn into the act along with the original scientists and engineers, and now also anthropologists, linguists and sociologists. In fact few fields, if any, are being left behind. And to repeat something said earlier, it would be a mistake to think that these people are just users of computation. On the contrary, they are participating in its invention – creating user interfaces, proposing architectures, rewriting the rules on what it is to publish, disrupting our understanding of identity. Moreover, the line between specifically computational expertise and general computational literacy is fading ...”

Cantwell Smith, B. 1996., *On the Origin of Objects*, Cambridge, MA: MIT Press

# Computing and Philosophy 7.5 credits

<b>Course code:</b>	CDT415	<b>Level of education:</b>	Advanced level
<b>Subject:</b>	Computer Science	<b>Area of education:</b>	Engineering
<b>Valid from semester:</b>	20082		
<b>Ratification date:</b>	11/29/07	<b>Change date:</b>	
<b>Progression:</b>			

## Objectives

We study the question of the nature of computing as information processing and its philosophical grounds.

The aim is to address the basic questions of scientific foundations of the research area, its methodology, applications and the value system - within the framework of the emerging Philosophy of Computing and Information.

## Learning objectives

The student will after fulfilled course have insights into the broad philosophical significance of computers and ICT as tools of production and communication of information, knowledge and ideas.

## **Course content**

Information, Philosophical foundations of Computing, Mind and AI including selected topics from Cognitive Science, Real and Virtual, Computers in Society, Ethics, Computers and Arts.

Final: Mini-conference and article presentation.

The course is designed as a combination of a series of seminars based on the lectures of eminent guest lecturers and distance study. It presents an international collaboration between several European universities and the University of Illinois at Springfield, USA. That will give course participants a unique opportunity to communicate with colleagues from other universities in the world, as well as with our lecturers who are leading experts within the field.

## **Teaching methods**

Lectures are combined with group discussions. The time between meetings is used for self study and paper writing.

## **Prerequisites**

At least 150 credits from an institution of higher education and a TOEFL test result, minimum score 173(CBT), 500(PBT) or 61(iBT) or an IELTS test result with an overall band score of minimum 5,0 and no band score below 4,5. The English test is COMPULSORY for all applicants except citizens of Australia, Canada, Ireland, New Zealand, the United Kingdom, and the USA.

## **Examination**

EXA1, 7.5 credits, marks 3, 4, or 5, Examination. Written exam (research paper), lecture notes, multiple-choice exam

[Rules and regulations for examinations in undergraduate education at Mälardalen University](#)

**Marks 3, 4, or 5.**

# Advanced Computational Thinking and Writing Research Toolbox

<b>Course code:</b>	DVA417	<b>Level of education:</b>	Second Cycle
<b>Subject:</b>	Computer Science	<b>Area of education:</b>	Engineering
<b>Valid from:</b>	SS13	<b>Main field of study:</b>	Computer Science

## Goals

The course focuses on computational aspects of reasoning and model-building in constructive research. The main objective is to give a student an improved understanding and knowledge of the state of the art in computational thinking techniques essential for contemporary research, from Software Engineering to Brain-inspired computing, and Cognitive computing. It includes academic writing and publication and the essentials of ethics. As a result the student will be able to write a publishable research article that demonstrates the ability to use computational thinking and exhibits high standards of writing.

## Learning objectives

On successful completion of the course, the student should be able to:

- identify and apply appropriate thinking tools from the state-of-the-art computational thinking toolbox
- understand and take into account the paradigm shift taking place within the field of Computing
- demonstrate understanding of the ideas presented in specialist lectures
- improve skills in academic writing in English and publication
- show an ability to use basic concepts of research ethics

# Computational Thinking and Writing Research Toolbox

## **Course content:**

The course deals with three main themes:

- The scientific way of thinking in research, with computational thinking in focus
- Writing and publication of research papers
- Values and ethical considerations in Research

## **Teaching methods:**

The course consists of lectures given by specialists within different research fields combined with in-class discussions. The course is given in English.

## **Prerequisites:**

At least 150 credits from an institution of higher education and a TOEFL test result (PBT) at least 530, TWE score 4, (iBT) at least 72, TWE score 17 or IELTS test score for academic purposes with an overall band score of minimum 5.5 and no band score below 5.0. The English test is **COMPULSORY** for all applicants except citizens of Australia, Canada, Ireland, New Zealand, the United Kingdom and the USA. The TOEFL code you must use is SWEDEN 9520.

## **Examination:**

INL1, 2 credits, marks 3, 4 or 5, Lecture NotesTEN1, 1.5 credits, marks 3, 4 or 5,  
Take-home exam
