

ECAP10

*VIII European Conference on
Computing and Philosophy*

General Editor: Klaus Mainzer

The interdisciplinary conference ECAP10 is devoted to the foundations and limits of man-machine interaction. Our thoughts and actions, our perception, imagination, and experience depend more and more on informational, computational, and robotic systems with increasing complexity and autonomy. What are their epistemic, ethical, and societal challenges for the future of mankind? ECAP10 will promote scholarly dialogues on all aspects of this computational & informational turn of society and the use of computers and robots in the service of philosophy.

ECAP10 is the eighth conference in the annual series. From Monday 4th to Wednesday 6th October, 2010 the European Conference on COMPUTING AND PHILOSOPHY (ECAP10) will be held at the TUM - Technische Universität München. ECAP is the European conference on Computing and Philosophy, the European affiliate of the International Association for Computing and Philosophy (IACAP).

**VIII European Conference on
Computing and Philosophy**

4 – 6 October, 2010

TU München

Table of Contents

Track I Philosophy of Computer Science	21
Specification and Artifact	24
Raymond Turner	
Formalizing correctness and interaction in typed programming languages	25
Giuseppe Primiero	
A Scientific Realist Perspective for Computer Science Inquiry	29
Janyl Jumadinova	
Deepak Khazanchi	
And the Winner is...	34
Andreas C. Pietz	
Software development: Out of the black box	38
Lindsay Smith	
Vito Veneziano	
Paul D. Wernick	
The Integration of Ontological Categories and Domain Concepts in Applied Ontology	44
Stefano Borgo	
Intepreters as computational mechanisms	52
Javier Oscar Blanco	
Renato Cherini	
Martin Diller	
Pío García	
<i>Computer science</i> must be naturalized... effectively!	56
Denis Chetwynd	
From Ability to Capability	66
ways to epistemology...	
John G. Geske	

How to Contain Inconsistency	70
or, Why Wittgenstein only scratched the surface	
Hendrick Decker	
Abstraction in Mathematics and Computer Science	76
Uwe Riss	
On Specification and other Formal Limitations of Formalized	
Ethical Concepts	80
Rainhard Z. Bengez	
Towards Empirical and Scientific Theories of Computation	81
Steven Meyer	

Track II Philosophy of Information and Cognition	88
Levels of Cognitive Extension	92
Holger Lyre	
The Role of Causally Relevant Properties in an Informational Theory of Causality	95
Christoph Schulz	
Technical Agency - A minimal Theory of Mind	99
Gerhard Chr. Bukow	
There's Plenty of Boole at the Bottom! How to Overcome Information Entropy	103
Francesco Berto	
Jacopo Tagliabue	
Quantum Computational Complexity in a Quantum Complex Universe	110
Vincent Paul Russo	
REPRESENTATION AND INFORMATION	114
A TWO-LEVEL ANALYSIS	
Hilmi Demir	

Track III Robotics, AI, and Cognitive Systems	118
Infospheres between Nanosphere and Ideospheres	121
Jean Sallantin	
Evolution of Biped Locomotions Using Bees Algorithm, Based On Truncated Fourier Series	125
Ebrahim Yazdi	
Vahid Azizi	
Abolfazl T. Haghighat	
An investigation of the reliability of fault tolerant cognitive technical systems	129
Thierry Sop Njindam	
Kristin Paetzold	
Universal Machines and Partial Isomorphisms: Models of Intelligence in Turing's Imitation Game	134
Hans Joachim Greif	
Semiotics as Theoretical Underpinning for Language Acquisition in Developmental Robotics	139
Frank Förster	
Chrystopher L. Nehaniv	
David Hartley in the twenty first century	145
Detecting and categorizing patterns associatively	
Steve Olivecrona	
Dirk Derom	
From Ability to Capability	149
Eric Bourreau	
Birgita Dresch-Langley	
Alexandro Garrido	
Jean Sallantin	
Digested Information, a Non-Semantic Motivation for Agent-Agent Interaction	155
Christoph Salge	

Control Mechanisms in Information Systems	159
A Logical Approach to Machine Intelligence	
Aziz Fevzi Zambak	
Concept Detection	163
Tobias Kötter	
Michael R. Berthold	
On The Other Hand: The Surprising Challenge of Conceptual Metaphor for Embodied Cognition	169
Robin Zebrowski	
Uncanny Moral Behavior	173
Carson Reynolds	

**Track IV Computational Neuroscience of Emotions
and Consciousness**

178

**What does it mean to do neuroscientific research on emotions and
consciousness and does it allow or even need a computational perspective?** **181**

Prof. Dr. Günther Palm

**A critical investigation of the foundations of informational
structural realism** **185**

Thomas Christopher Dasch

Florentin Neumann

**My Ipad as my best friend or the question: who, and if yes, where is Mary? –
Computer and Individuality** **190**

Hannes Bräutigam

**Propositional Attitude Approaches in constructing Artificial Emotions in
Androids** **195**

Wolfgang Gessner

What Is It Like to Be a Human? **201**

Consciousness, Free Will and Aesthetics from the Perspective of Information
Integration

Marcin J. Schroeder

Track V Computational Approaches to Thoughts and Actions	208
How conscious the immune system can be?	211
Chiara Porcelluzzi Luca Albergante	
Toward a "Reading Spaces" Reification	216
Jean-Gabriel Ganascia	
The Extended Mind and the Digital Milieu	222
Yuk Hui	
Enacting a Cognitive Domain in the Interaction with Perceptual Supplementation	226
Alfonsina Scarinzi Olivier Gapenne	
Modeling Leibniz's Monade by using Multi Agent System	229
Fuki Ueno Yasuhiro Suzuki	
Philosophical consequences of free interaction between humans and robots.	236
Tillmann Pross	
A Model for Memory	240
Synergies in sparse matrices Klaus Prätor	
Simulating Science?	244
Computer Simulation versus Experiment Inga Bones	
Hello Dave. Shall we continue the game?	251
Questioning Man-Computer interactions Liesbeth De Mol	
What is a Formal Ontology?	256
Some Meta-Ontological Remarks Ludger Jansen	

A Social Epistemology for Epistemic Social Software

Judith Simon

261

Track VI From Information to Knowledge Society	266
The Networked Self in the Information Society	270
Philip Brey	
Virtualized, Personalized and Ubiquitous Learning in Post-Industrial Society	275
Andrei Kojukhov	
Ilya Levin	
Surviving The Singularity	281
Improving Psychological Adjustment in Anticipation of Change	
Raymond Reed Hardy	
Communication, control and freedom	285
For an archaeology of information technologies	
Teresa Numerico	
Simulation and Application	291
The Bilateral Relationship between Education and Artificial Intelligence	
Jiyoun Jia	
E-Reading Philosophical Texts: On The Tension Between Dynamic Text Comprehension and the Irreversibility of Annotations on Paper	295
Jochen Huber	
Andreas Kaminski	
Societal Dimensions of HIS as a Trading Zone	300
Could the Informatization Really Benefit the New Medical Reform?	
WANG Chengwei	
LIN Nan	
How to Understand the Debate on Precautionary Principle in Risk-based Decision Making	305
LI Ping	
Political and educational emergences in a new techno-social weaving in Colombia	310
Rocío Rueda Ortiz	310

Track VII IT, Cultural Diversity, and Technoscience Studies	316
Informational precaution	320
Wolter Pieters	
The Metaphysical Character of Information	326
Heidegger and Baudrillard	
Andreas Beinstener	
Reconfiguring the User: Raising Concerns over User-Centered Innovation	332
Diego Compagna	
(A)Normality seen by an inhuman(e) eye	337
Alma Kolleck	
Andreas Traut	
Multilingualism and Cultural Diversity in IT and TC Field	342
A short theoretical and empirical discussion	
Afsar Sohleila Sattari	
Trusting our Distrust	344
Cecile K. M. Crutzen	

Track VIII Information Ethics and Roboethics	350
Information Ethics for Robotic Agents	354
Gordana Dodig-Crnkovic	
You, robot	358
Ontology, appearance, and the linguistic construction of robots and human-robot relations	
Mark Coeckelbergh	
Artificial Morality	360
Moral Desirability vs. Computational Feasibility	
Linda Johansson	
Henrik Carlsen	
Care Centered Value Sensitive Design	364
a framework for the design of robots in healthcare	
Aimee van Wynsberghe	
A Methodological Reflection on Converging Technologies	366
Or, Wherein the Empirical is in Information Ethics?

You, robot

Ontology, appearance, and the linguistic construction of robots and human-robot relations

Mark Coeckelbergh

University of Twente

Extended Abstract

Although most of us think of robots as 'mere machines', empirical research shows that we sometimes treat them as if they were more than objects. We respond to them with far more affection or even unease (Mori, 1970) than one would expect. Some robots become 'social robots' or artificial companions (Breazeal, 2003; Turkle, 2006; Dautenhahn, 2005, 2007). How can we make sense of this paradox from a philosophical point of view?

Traditional Western ontologies, with their strict subject-object distinctions, their belief in intrinsic properties, and their objectivist approach, are not very helpful for understanding what goes on here. What we need instead is a social-relational and phenomenological approach to ontological status, which shows how robots can appear to us as 'quasi-others' (Ihde, 1990) within quasi-social relations. The 'machine' appearance is only one possible interpretation: the robot can have different meanings and there is 'gestalt switching' between them.

Responding to work by Ihde, Searle, and Turkle (Ihde, 1990; Searle, 1980, 1995; Turkle, 1984, Turkle et al 2006), this paper argues that the relation between subject and (more-than-) object is mediated by language. It proposes a 'linguistic turn' in philosophy of robotics that changes the focus from what robots 'are' to how robots appear to us, and from questions about what the robot can say (philosophy of early AI, e.g. Turing, 1950) to what humans say (philosophy of contemporary social robotics).

It is shown that the words we use do not only represent robots and human-robot relations but also interpret them and even construct them. This view enables us to attend to shifts in talking about robots to talking to robots as interpretations and constructions of human-robot relations. In linguistic terms, we can observe shifts from the impersonal third-person pronoun "it" to the personal second-person "you" and sometimes even the first-person plural "we".

This makes sense of what goes on between humans and robots by revealing at least two different modes of relating to robots, which are both linguistically mediated: an 'objective' one and a 'quasi-social' one. Neither of these modes or repertoires has ontological priority.

Although more work is needed to explore its full scope and implications, this approach can contribute to a richer understanding of how we relate to robots and to other entities.
